

PRESS RELEASE

March 2016

Husqvarna MS 360 masonry saw - 360° of innovation, cutting performance and ergonomics.

The Husqvarna MS 360 masonry saw offers 360 degrees of benefits. With a cutting capacity of 5-inches deep and a 17.25-inch cutting length, it is the next generation of our popular MS 355 masonry saw. A lot of unique features have been developed for this saw to help take your projects, and ultimately your business, to the next level.

“The MS 360 was developed to provide masonry contractors with a tool to increase their efficiency on the jobsite. Not only looking at cutting performance, but also the way he/she sets-up a saw on the jobsite or moves it around, the cuts that need to be made and the amount of cutting completed. We looked at every angle to develop a useful, practical and efficient saw,” says Mark Michaels, Director of Product Management - Americas.

360 Degrees of Innovation - the MS 360 offers a lot of new features and benefits not normally seen on masonry saws. This is Husqvarna Construction Products' first masonry saw equipped with a patented water containment system, which keeps water, slurry, and debris controlled; delivering a cleaner work piece and work space. The double water splash guard decreases water spray behind the saw and makes cleaning easier.

360 Degrees of Cutting Performance - in addition to cutting up to 5-inches deep, this saw can make different types of cuts as easily as a tile saw. Unique to this masonry saw is the ability to make 22.5 degree and 45 degree bevel cuts by simply rotating the saw head. The saw head can also easily switch between plunge and miter cutting, making it fast and versatile on the jobsite. The saw is ideally suited for cutting pavers, bricks, stone and concrete block.

MORE WORK? DONE.
The MS 360 offers 360 degrees of innovation, cutting performance and ergonomic benefits to accomplish more.

360 Degrees of Ergonomics - in addition to performance, this saw was made to keep the operator comfortable and increase his/her efficiency. The optional adjustable stand has two wheels and when the saw is locked on the stand, one person can move the unit around the jobsite. The stand also allows the user to position the saw at various heights or collapse it with one hand. The quick and easy set-up means more cutting time and less downtime.

The saw comes with a Husqvarna Vari-Cut™ Turbo blade and when paired together, the duo will make quick work of hard concrete, stone and other masonry materials.

MAIN BENEFITS

- Water management- the patented water management system keeps water, slurry and debris controlled; delivering a cleaner work piece and work space.
- Exceptional cutting depth - 5" cutting depth for a standard 14" blade.
- Easy transport - quick and easy set-up and breakdown mean more time cutting on the job.

GET THE RIGHT ANGLE.

The head on the MS 360 rotates for easy 22.5 degree and 45 degree bevel cuts. In addition, the saw head can easily switch between plunge and miter cutting, making it fast and versatile on the jobsite.

TECHNICAL SPECIFICATIONS

- Blade diameter, in (mm): 14 (350)
- Depth of cut, in (mm): 5 (127)
- Bladeshaft, rpm: 2,330
- Power output, hp (kW)*: 1-½ (1.1)
- Power source: electric
- Voltage, V: 115 or 115/208-230
- Rated current, A: 60/AC
- Phase: 1
- Weight uncrated, lbs (kg): 131 (59.5)

** as rated by engine manufacturer.*

FLEXIBLE.

Two optional stands - the adjustable stand or fixed height stand.
